

MULTIPASS LABS

PROJECT OVERVIEW & CURRENT STATE

Generated: 10/25/2025

What Is This Project?

Multipass Labs is an experimental collective platform showcasing audio-reactive visuals and generative art with a dark, glitchy terminal aesthetic. The site is "operated" by 10 mysterious lab entities, each with their own signature style and color scheme.

Tech Stack

- Next.js 14 (App Router) + TypeScript
- PostgreSQL + Prisma ORM
- Redux Toolkit for state management
- Stripe for payments
- Terminal/CRT aesthetic with Web Audio API for glitch sounds

What's Working (Strong Foundation - ~75% Complete)

Excellent Implementation

- Boot Sequence: Immersive terminal startup with Matrix rain, entity authentication, glitch audio, scanlines
- Lab Entity System: 10 unique personas with signatures, colors, roles, and individual animations
- Terminal Aesthetic: Complete CSS framework with CRT effects, phosphor glow, scanlines, glitch animations
- Audio System: Richard Devine-inspired procedural glitch sounds, boot tones, ambient drones
- Homepage: Stunning terminal interface with entity cycling, subliminal flash effects, command history
- About Page: Full collective lore, entity roster, technical specs in terminal style
- Blog: Entity-attributed posts with filtering, metallic waves background

Database & Core Features

- Prisma schema with Posts, Products, Gallery, Orders, Users
- Entity attribution system (all content tagged with entity ID)
- Redux state management (auth, cart, UI)
- NextAuth authentication setup

& p What Needs Work

Missing/Incomplete

- Shop Page: Currently just a placeholder (needs product grid, cart, Stripe integration)
- Music Page: Stub only (needs audio player, visualizations)
- Gallery Styling: Inconsistent aesthetic (white text vs terminal green)
- Terminal Commands: No keyboard command system (/help, /entities, etc.)
- Mobile Testing: Effects may not work well on small screens

Code Quality Issues

- Duplicate files (startup-intro.tsx v1 & v2 - violates CLAUDE.md "no -v2 files" rule)
- Multiple header components with unclear usage
- Inconsistent translation usage

Ø<ß The 10 Lab Entities

nU11.form | [nU11.form] v0.3a | Cyan | Glitch theory
drex:0m | [drex:0m] b01 | Purple | Chaos mapping
noize.p4th | [noize.p4th] //dev.05 | Green | Audio-reactive
x3n0.form | [x3n0.form] " x.14 | Blue | Generative art

Ø=ÜÊ Transformation Plan Status

From CLAUDE.md's 5-phase plan:

- ' Phase 1: Core Infrastructure (95%)
- ' Phase 2: Visual Transformation (90%)
- & p Phase 3: Entity Attribution (75%)
- & p Phase 4: Content & Pages (50% - missing shop/music)
- 'L Phase 5: Interactive Features (20%)

Recent Work

Last commits focused on polish:

- Boot replay button in header
- Fix hydration errors
- Liquid chrome metallic effect
- Subliminal animation stabilization
- TypeScript fixes

Key Directories & Files

Core Features

lib/entities.ts	[Entity system - 10 entities]
lib/audio/glitch-audio.ts	[Audio generation - complete]
app/[locale]/page.tsx	[Homepage - excellent]
app/[locale]/about/page.tsx	[About - excellent]
styles/globals.css	[Terminal CSS - comprehensive]

Components

components/ui/startup-intro-v2.tsx	[Boot animation - main version]
components/ui/simple-header.tsx	[Header - active]
components/backgrounds/entity-animations.tsx	[Canvas animations]

Pages

app/[locale]/blog/page.tsx	[Blog - good]
app/[locale]/gallery/page.tsx	[Gallery - needs work]
app/[locale]/shop/page.tsx	[STUB]
app/[locale]/music/page.tsx	[STUB]

Implementation Highlights

Strongest Areas

- Startup/boot sequence is exceptional - smooth, immersive, feature-rich
- Audio system is well-engineered with proper cleanup
- CSS terminal aesthetics are comprehensive and professional
- Entity system is elegant and extensible
- Homepage is visually stunning with good UX

Most Mature Features

1. Terminal aesthetic & styling
2. Boot animation & audio
3. Entity system & lore
4. Blog with entity filtering
5. About page with collective story

Needs Most Work

1. Shop page (completely missing)
 2. Music page (completely missing)
 3. Gallery styling (inconsistent)
 4. Mobile experience (untested)
 5. Interactive features (limited)
-

This is a solid foundation for an experimental collective art platform.
The main work remaining is completing the shop/music pages, polishing the gallery styling,
and adding interactive features like terminal commands and more glitch effects.
